

Save time and money

With our temperature calibrators' new features.

” Martin Opfermann
Product Manager for temperature calibrators

WebApp, easy mode and camera

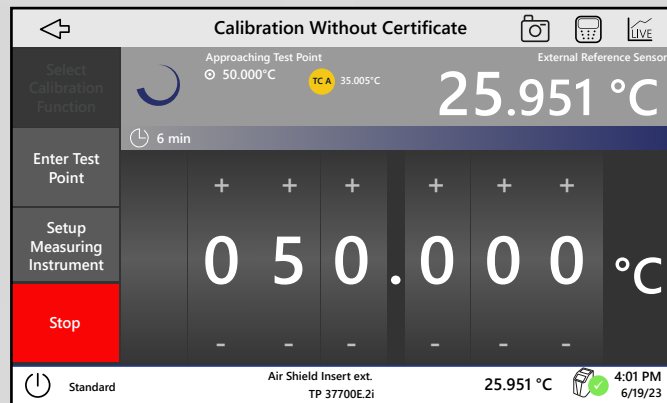

For faster and easier calibration results

Remote calibration with WebApp

With the WebApp, you can conveniently control calibration processes on your PC or smartphone. The connection is made via LAN or WLAN using a router.

Many useful features are available in the WebApp:

- Remote access to the calibration process
- Display log data and system information
- Access to functions and settings
- Creation of calibration tasks and DUTs

Simple calibration

For simple calibration tasks, use the “ Calibration without certificate” function, which **concentrates on the essentials**:

- Setting the target temperature
- Starting the calibration process
- Ending the calibration process

Hardly any training is required – calibration becomes a breeze.

Automatic calibration using the camera

Read temperatures yourself? Manual acknowledgement? You can save yourself that from now on: thanks to our **automatic calibration using the camera**.

- A photo of the device under test is taken at each test point
- The next test point is automatically triggered
- The values are only transferred to the calibration certificate once the entire calibration has been completed
- The photos are integrated directly into the calibration certificate as additional proof of calibration

Completely eliminating waiting times as a result. During the calibration process, the user can carry on with other activities without any interruptions.

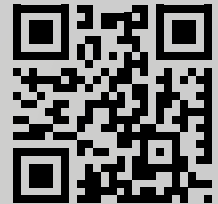

Reliable calibration with SIKA

SIKA developed the first dry block temperature calibrator and made it ready for series production as early as the beginning of the 1980s. Over the years, our portfolio has steadily evolved. In the meantime, we offer temperature calibrators for all calibration tasks.

We have not lost our innovative spirit and passion for calibration instruments over the years: we strive to make our products a bit better every single day.

Do you want to know more about our temperature calibrators? Simply visit our website at www.sika.net or use the QR code on the right.

We look forward to seeing you!
